This work wouldn’t have been possible without the excellent guidance and leadership by

- Mr. Kunal Kumar, Joint Secretary & Mission Director - Smart Cities Mission
- Mr. Rahul Kapoor, Director - Smart Cities Mission
- Mr. Hitesh Vaidya, Director – NIUA
- Mr. Padam Vijay, Technical Advisor - NIUA
- Ms. Kakul Misra, Head, CDG - NIUA

We would also like to acknowledge inputs from the quadruple helix of Academia, Government, Industry and Citizen representation who contributed significantly with their inputs in the initial Domain Working Groups that were formulated to get insights and opinions from these 4 important stakeholders

National Urban Digital Mission (NUDM)

Over the past two decades, India has witnessed the role of technology as an enabler for development and progress. India is poised to lead the digital revolution and our cities can be the primary beneficiary. Our ability to seamlessly adopt emerging technologies into urban governance holds the key to a powerful story of transformation in India’s journey towards becoming an economic powerhouse. Responding to this pressing necessity, National Institute of Urban Affairs is instituting the Centre for Digital Governance (CDG), an initiative to convene the digital efforts of the Ministry of Housing and Urban Affairs and also consolidate its existing efforts. National Urban Digital Mission (NUDM) launched in February 2021, aims to build a shared digital infrastructure that will strengthen the capacity of the urban ecosystem to solve complex problems at scale and speed. Thus improve the ease of living for citizens through accessible, inclusive, efficient and citizen centric governance across India’s 4800 towns and cities. The NUDM inherits the guiding principles of the National Urban Innovation Stack (NUIS) - Strategy and Approach paper, released by MoHUA in 2019 as a vehicle to accelerate the ecosystem for urban transformation.

One of the key deliverables under NUDM is the creation/ adoption of standards which will enable improved information consistency, analytics, secure data access & transfer, smarter business processes; while also enabling diverse stakeholders to collaborate and their corresponding platforms and processes to interoperate seamlessly. The following standards (in various stages of development/ adoption) are applicable for NUDM:

1. Municipal Governance Reference Architecture as a reference blueprint for platforms
2. Knowledge Standards with key data elements and their standardized data interpretation
3. API definitions for standardized integration with the National Dashboard
4. Security Assurance Standards for enabling data privacy controls
5. National meta-data standards for metadata management & data quality enablement at state & national dashboards

Out of these, the Municipal Municipal Governance Reference Architecture¹, Security Assurance standards² and Property Tax Knowledge Standard³ have already been published and are available for download. National Metadata Standard⁴ has been published by the Government of India.

NUDM Knowledge Standards

Need for Knowledge Standards

ULBs across India have different terminology and vocabulary for Urban Governance. This is due to inherited and new state laws and different Municipal Governance system implementations. Lack of uniform knowledge of important data elements and clear vocabulary for urban governance terms, leads to the inability to share & interpret data uniformly and/or compare Urban Local Body (ULB) performances.

Knowledge standards typically have the following applications

- Knowledge standards help us in identifying and categorizing important data elements for a domain
- Knowledge standards help in resolving differences in terminology for Urban Governance
- Knowledge standards can be used to analyze current city domain models, processes, reports & KPIs; thus, retrofitting existing data models with missing data

Governing principles in Design of Knowledge standard

Normally information taxonomy preparation begins by asking the following questions (Earley, 2015)\(^5\) (Earley, 2015):

- What are all of the things that you interact with on a day-to-day basis?
- What are all of the processes that you engage with, applications you interact with, and people you speak to, both internally and externally?
- How do those people, processes and technologies interact?
- Information linkages identification

To ensure this taxonomy fits the needs of interested stakeholders the following principles have been followed in designing it.

**Minimalist:** The standards are designed to have minimum base elements common across ULBs to ensure interoperability, harmonization and data driven governance. These can then be adopted and built upon by some ULBs with higher process complexities.

---

**Evolvable**: The standard is designed to evolve over a period of time thereby adapting to changing needs and emerging technologies thus making the system comprehensive progressively.

**Modular**: The classifications and categorizations in the knowledge standard are designed modularly, yet they function together as a whole. They are independent and self-contained and may be combined and configured with similar units to suit disparate contexts. E.g., The Property “Use” element and its sub classifications can be easily reapplied in the context of any Building Plan Approval System or Trade License System.

**Extendible**: The standard is designed to be exhaustive and the elements of Urban Governance are positioned in a hierarchy which can accommodate both horizontal and vertical additions. This leaves room wider adoption and innovation to suit contexts of any ecosystem. The end goal is to build a knowledge practice that supports Open Standards with the Data Element taxonomy as a base.

**Open**: The standard is designed to be ‘open’ to enable wider ecosystem participation and use.

How to read this document?

Section 2.1 captures Key data elements associated with the Trade License Data Entity.

Section 2.2 captures key channels of transactions i.e., new application/ grievance registration/ payment etc.

Section 2.3 captures key stakeholders involved in TL service delivery

Section 2.4 captures key processes within the TL domain with clearly defined input & output data elements.

Section 2.5 captures key Reports and KPIs that ULBs and states/UTs are encouraged to use.

All direct sub-classifications and components captured in the taxonomical hierarchy are shown as normal text (For Ex: “2.1.1 Trade License ID”)

In processes section (section 2.4),

- Input criteria (whether from citizen or ULB) of the process is shown in *italics text* (For Example “2.4.3.3.2 Mode of Payment”)
- Output of the process is shown in *Bold text* (For example “2.5.1.1 License Register”)
• Direct sub-classifications or sub-components are shown as normal text (For Example 2.4.4.1.1 Types of Assessment classification has 2.4.4.1.1 Issue of New License sub-classification (all depicted in normal text)

How to use this knowledge standard?

TL Knowledge standard can be used in 3 different ways:

1. Direct application by storing, generating and using these important data elements (entities, stakeholders, processes & reports) in day-to-day operations

   Example 1: ULB Officials add channel through which an application was received and ULB type in the TL application data model while acknowledging and processing the Application/Assessment request received from the Trade License service application/ CSCs.

   Example 2: Application form for a New Trade License Application also collects Property ID (PID) of the property where trade is located. This PID can further be used to fetch property details like use, location, ownership, payment details – making need of bulky service forms redundant. This will also result in re-use and harmonization of data across departments.

   Example 3: Monitoring of application by their status, their SLB adherence and channels from which the transaction happens and the DCB register empowers ULB Officials to take corrective and preventive steps as needed.
2. Indirect application by using these data elements in evidence-based governance and long-term planning

Example: Analyzing trade applications by purpose for which the application was made may help the ULB in preparing its economy around it. It can also help in planning the inspection schedules better with respect to the types of regulations needed.

3. Information consistency by using these data elements while using and sharing data (via Metadata tags in reports and dashboard)

Example: Consistent use of Data elements, processes, KPIs and their definitions from this Knowledge Standard helps in implementing Information consistency across ULBs. To ensure information consistency, while ULBs may use new or existing platforms while delivering TL services, they should use Metadata tags from the data elements defined in this knowledge standard.

It may be noted that

1. The data elements described in this knowledge standard are not complete and ULBs may add/ remove data elements as per actual need.
2. ULBs and their technology partners are however advised against modifying the data elements while using these as Metadata tags i.e., Application ID should be shared as ‘Application ID’ and not ‘App ID’ or ‘Appln ID’ in the ULB reports.

Revisions to the document

This is planned to be a working document. It will be revised regularly to guarantee that the knowledge standard incorporates learnings from various implementations and learning cycles as they progress and remain relevant. Amendments and regular updates to its text and indicators are to be expected on a continuous basis.

No Sub-License Allowed

TL Knowledge Standard is developed as open standard under NUDM by NIUA. No part(s) of the document can be sublicensed further by any other organization. Any attempted sublicense, whether voluntarily or otherwise, shall be null and void, and will attract penal actions.

1 Trade License

Urban Governance in India is predominantly the constitutional domain of the state government, who delegates power to Municipal Bodies/Urban Local Bodies (ULBs) through a specific legislation. The Trade License module in a Municipal Governance system provides the facilitation to all the business owners in order to register their business/trade under the Urban Local Body and is governed by the revenue department for collection of the tax\(^6\) (Commissionerate of Municipal Administration, 2017). The license also establishes certain operational protocols and safety measures for the general welfare of all commercial establishments and the workforce involved.

- The trade license that is issued by the municipal corporation is regulated by the state government of that particular state
- A trade license ensures that no one is affected by the nuisance and the health hazards of any trade or business
- To make sure that no business carrying any unethical business practices or trade it is having been made necessary by the government. So, to carry out any business in any particular area it is to be ensured that there the person is having a trade license
- This license makes sure that there is harmony in the society that every business is following the rule and the guidelines that are set by the government. That they are obeying the safety measures
- A trade license registration makes sure that the trade activities in the country are aligned

1.1 Background

The government has made it necessary for one to obtain trade license to ensure that the person is not carrying out unethical business practices and is following the relevant rules, safety measures and guidelines. A licensed business protects its owners against certain types of liability. If damage or injury occurs the business actions or doings, the personal finances would not be at stake in any settlement. The various types of trade licenses offer different levels of protection. TL also covers various businesses under Shop & Establishment Acts which means to regulate the working and employment conditions of worker employed in shops and establishments including commercial establishments. The Act generally provides for fixation of working hours, rest intervals, overtime, holidays, leave, termination of service, maintenance of shops and establishments and other rights and obligations of the employers and employees.

As part of National Urban Digital Mission (NUDM), NIUA is also offering a platform NUGP to states which offers Trade License Issuance & Payment functionality using Trade License (TL) module.

---

1.2 Who is Responsible?

The government of India authorizes the license in a manner to regulate businesses in cities across the country. It grants permission by the way of letters or documents/certificates to carry on any business or trade where it is located. The issuance of the license varies from state to state depending on the local government agencies (Municipal) rule and regulations and Municipal Acts.

It is issued by the licensing department of the municipal corporation in various departments like industries, engineering, health etc. The ULB authorities are hence mandated to identify the trade running in the designated territory and perform assessment of fee value and the result of which the trade running in their respective ULB should be registered and a unique Trade License ID (TLID) will be issued to the owner for making the necessary payment.

The traders have to renew their license issued once the period of the license gets over and the result of which the existing unique Trade License ID will be renewed.

ULB officials need to carry out the enforcement and other functions prescribed under the Act. Inspections are carried out to ensure the opening and closing hours of shops and establishments fixed under the Act. Challans may be filed against the defaulting employers by the Chief Inspector of shops on the report of the area Inspector before the area Metropolitan Magistrate.

2 Taxonomy for Trade License

Taxonomy for Trade License tries to capture the most important data elements, entities, their properties, categories, subcategories, parameters, and specifications within this domain as well as other associated areas. Subsections in section 2 also define all the key terms in the trade license domain comprehensively.

A well-structured TL taxonomy helps by:

- Identification and regulation of trades enabling effective enforcement and regulation
- Building accountability and ensuring transparency
- Building confidence among the traders and business owners to run a trade
- Identification and process key data elements to enable evidence-based decision & policy making
Figure 1: Taxonomy for Trade License

2.5.1.4 Demand Collection Balance Register
This report provides details about demand, collection and balance of trade license fees for that financial year.

2.5.1.5 Receipt Register
This report provides details about the payment made and receipt issued after the payment of fees.

2.5.1.6 Cancellation Register
Cancellation register report provides the information about the total number of trade license that are cancelled in a given interval. This report gives the clear idea about the details like trade name, sub trade name, and applicant details, zone/ ward/ SI ward, current owner and status about the trade license\(^\text{10}\) (Commissionerate of Municipal Administration, 2017).

2.5.2 Trade License KPIs
This refers to KPIs that should be captured for TL management.

2.5.2.1 Digital Adoption
Digital adoption means attaining a state where an individual is capable enough to utilize an application, software, or tools to its fullest capacity or the potential to carry out a variety of digital processes. Digital adoption of TL can be measured in the following terms:

- % of citizens using digital channels for TL payment

- % of citizens using digital channels for accessing services
- % volume from different channels
- % of trade licenses issued within SLG

2.5.2.2 SLB Adherence
SLB Adherence means the number of applications processed by the ULB within SLB as determined by the rule or the law.

2.5.2.3 Bills to Demand Ratio
This means the ratio of number of generated bills with respect to number of assessments completed.

2.5.2.4 Collection Ratio
This means the ratio of actual collection with respect to demand generated to account collections.

2.5.2.5 Top and Least Performers
Top and Least Performers list provides information about the zones/wards who have highest and least collection ratios as well as bills to demand ratio in the ULB.
